

## Agatha Ruiz de la Prada Baby

Continues to develop its concept of collection based on organized collection, giving priority to ranges of colours and carrying out the most universal conception of its meaning.

A mixture of tones, bathed in intense spring light: fuchsia, red, green, coral and blue colours, with the fluorescence that is reflected in each of its lines.

It's a glamorous fashion sign inspired by details that bring the graphics of its romantic icons, specially adapted for our babies. Contrasting colours and use of natural materials: voile, satin, linen, poplin, piqué and stitch, gives the Spring-Summer 2014 collection, functional and comfortable clothes, which are characteristics of the brand. The bath collection is designed for leisure and holidays and it's inspired by tropical environments and sailors, with prints, original shapes and harmony of acidity in colours, as the main theme.

When they go to sleep, Agatha Ruiz de la Prada Baby proposes a very attractive option. 100% cotton garments, full of graphics, prints, ornaments, colorful mixtures and apparent embossing.

This will be the proposal of Agatha Ruiz de la Prada Baby, a cheerful message, fun, colorful; it carries their own shapes and styles of feeling in order to understand the world around us.
